Table of Contents

Getting the application running

The application can be executed from a single runnable .jar file. *mancala.jar* is located in folder *dist*. Full path:

Mancala\dist\mancala.jar

The .jar file can not be moved to another location since it needs the resources present in that folder. The whole *dist* folder can be moved to other directories.

If for any reason user is experiencing problems running *mancala.jar* the whole project should be imported to a IDE (we used Eclipse for example) and run there as a Java application.
